GENERAL INSTRUCTIONS

INSECTICIDE RESISTANCE WARNING

GROUP	2C	INSECTICIDE
-------	-----------	-------------

For insecticide resistance management, IMPEDE is a Group 2C insecticide. Some naturally occurring insect biotypes resistant to IMPEDE and other Group 2C insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if IMPEDE or other Group 2C insecticides are used repeatedly. The effectiveness of IMPEDE on resistant individuals could be significantly reduced. Since occurrence of resistant individuals is difficult to detect prior to use, BASF Australia Ltd accepts no liability for any losses that may result from the failure of IMPEDE to control resistant insects.

IMPEDE may be subject to specific resistance management strategies. For further information contact your local supplier, BASF representative or local agricultural department agronomist.
